DATABASE SYSTEMS ENGINEERING AND DISTRIBUTED BACKEND DEVELOPMENT (25CS1302E)

Y25 - 2026-2027 Trimester - 4

Project Abstract Submission Form

Sec No-2	Team No-	Project Title-Online Food Delivery Platform
----------	----------	---

1. Abstract:

The Online Food Delivery Platform is a database-driven web application designed to simplify and automate the process of ordering food from restaurants through an efficient backend system. The platform connects customers, restaurants, and delivery services, allowing users to browse restaurants and menus, add food items to a cart, place orders, make payments, and track their order status. Restaurants can manage their menus and incoming orders, while administrators can manage users, restaurants, food items, and overall platform activities. The primary focus of the project is the design and implementation of a reliable relational database and backend architecture. The database maintains information related to users, restaurants, food items, orders, order details, payments, addresses, and delivery status while maintaining data integrity through appropriate relationships, constraints, and normalization. The backend provides RESTful APIs to handle authentication, menu management, cart operations, order processing, payment records, and order tracking. Secure authentication and authorization mechanisms are implemented to provide role-based access for customers, restaurant owners, delivery personnel, and administrators. The project demonstrates the practical application of Database Management Systems and backend development concepts, including relational database design, SQL queries, CRUD operations, normalization, transactions, API development, authentication, and server-side validation. The proposed system provides a scalable and organized solution for managing the complete online food ordering workflow while ensuring efficient data storage, retrieval, and processing.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520030205	Deepsikha Biswal	
2520030209	Alekhyia	

3. Frameworks / Platforms / Software Used

- **Frontend Framework:** React.js
- **Backend Runtime:** Node.js
- **Backend Framework:** Express.js
- **Database:** MySQL
- **API Architecture:** RESTful APIs
- **Authentication:** JWT (JSON Web Token) and bcrypt
- **API Testing:** Postman
- **Development Environment:** Visual Studio Code
- **Version Control:** Git and GitHub

Guide Name and Signature (remarks if any) _____
